

Think of a number...

What to do...

Here's the trick!

- Think of a number between 1 and 20
- Multiply it by 5
- Add five
- Double it
- Remove the last digit
- Subtract one

Note down your answer. What do you notice?

Now try it again with another number.

1. Ask as many different people as you can to think of a number.
 2. Tell them every step in order up to and including step 4.
 3. Then silently, carry out steps 5 and 6 and tell them the number they thought of!
- Hopefully they will be well impressed!
