

Three Dotty Shapes...

What to do...

- 1) Draw a grid of three rows of three dots. Join some dots to make a shape with straight sides (a polygon).

- 2) How many shapes with straight sides can you make by joining dots on grids exactly like this one?
- 3) Draw enough dotty grids to enable you to draw at least six different shapes.
- 4) Can you name each shape? Remember to count the sides.
