

Remainder Scores

What to do

1. Use six mixed 2p and 1p coins placed in a mug
2. Tip these out of the mug.
3. Add up the coins that land heads up, e.g. $2p + 2p + 1p = 5p$.
4. Choose a number from one of the circles below.
5. Divide this by the amount in heads, e.g. $124 \div 5 = \dots$
6. Score the remainder
7. Repeat this six more times and then add up all the remainder scores.

$$124 \div 5 = ?$$

$$\underline{10 \times 5 = 50}$$

$$\underline{10 \times 5 = 50}$$

$$\underline{4 \times 5 = 20}$$

$$\underline{24 \times 5 = 120}$$

$$\text{so } 124 \div 5 = 24 \text{ r}4$$

$$\underline{\text{Score} = 4}$$
