

Folded paper holes!

What to do...

1. Fold a piece of paper in half.
2. Draw two straight lines that meet against the folded edge. See the example below.
3. Cut along the lines and then open out your paper.
4. What shape is the hole? Is it a shape you know?
5. Do this again and try to make a shape which doesn't have 4 sides.
6. Can you make a square, an oblong? How about a triangle?
7. Remember you can only cut two straight lines!

*When you open up
the paper, this hole
has made a diamond
shape!*
